- d) The individual constituent of the index shall have a trading frequency greater than or equal to 80% and an average impact cost of 1% or less over previous six months.

The Underlying Index i.e. Nifty Total Market Momentum Quality 50 Index complies with the aforesaid portfolio concentration norms.

### **Change in Investment Pattern**

#### **Portfolio rebalancing due to short term defensive consideration :**

Any alteration in the investment pattern will be for a short term on defensive considerations as per paragraph 1.14.1.2.b of the SEBI Master Circular dated June 27, 2024, the intention being at all times to protect the interests of the Unit holders and the Scheme shall rebalance the portfolio within 7 calendar days from the date of deviation. It may be noted that no prior intimation/indication will be given to Investors when the composition/asset allocation pattern under the Scheme undergoes changes within the permitted band as indicated above.

#### **Portfolio rebalancing in case of passive breaches :**

Pursuant to paragraph 3.6.7.1 of the SEBI Master Circular dated June 27, 2024, in case of change in constituents of the index due to periodic review, the portfolio of the Scheme will be rebalanced within 7 calendar days. In the event of involuntary corporate action, the Scheme shall dispose of the security not forming part of the Underlying Index within 7 days from the date of allotment/listing.

Any transactions undertaken in the portfolio of the Scheme in order to meet the Redemption and Subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.

Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be effected only in accordance with the provisions of sub regulation (15A) of Regulation 18 read with sub-regulation (26) of Regulation 25 of the SEBI MF Regulations.

### **B. WHERE WILL THE SCHEME INVEST?**

The corpus of the Scheme will be invested in equity and equity related securities included in the Underlying Index regardless of their investment merit. Subject to the SEBI MF Regulations, the corpus of the Scheme can be invested in any (but not exclusively) of the following securities / instruments:

1. Equity and equity related securities constituting the Underlying Index.
2. Equity Derivatives
3. Money Market Instruments
4. Reverse Repo and/or Tri-Party Repo on Government Securities and/or Treasury bills

5. Cash & cash equivalents
6. Units of money market / liquid mutual fund schemes, subject to requisite regulatory guidelines.
7. Any other securities / instruments as may be permitted by SEBI from time to time, subject to requisite regulatory approvals, if any.

Further, the Scheme intends to participate in Stock Lending as permitted by SEBI.

Detailed definition and applicable regulations/guidelines for each instrument is included in Section II.

### **C. WHAT ARE THE INVESTMENT STRATEGIES?**

The Scheme will be a passively managed index fund which will follow an investment approach designed to track the performance of Nifty Total Market Momentum Quality 50 TRI. The Scheme seeks to achieve this goal by investing in securities constituting the Nifty Total Market Momentum Quality 50 Index in the same proportion as in the Index. The AMC does not make any judgement about the investment merit of the individual security constituting the Nifty Total Market Momentum Quality 50 Index nor will it attempt to apply any economic, financial or market analysis. Indexing eliminates active management risks with regard to over/ underperformance vis-à-vis a benchmark. This would be done by investing in all the stocks comprising the Nifty Total Market Momentum Quality 50 Index in approximately the same weightage that they represent in Nifty Total Market Momentum Quality 50 Index. The Scheme will invest at least 95% of its total assets in the securities comprising the Underlying Index. The Scheme may also invest in Money Market Instruments to meet the liquidity and expense requirements.

The Scheme shall follow a passive investment strategy. The performance of the Scheme may not be commensurate with the performance of the benchmark of the Scheme on any given day or over any given period. Such variation is commonly referred to as the Tracking Error. The investment strategy would revolve around reducing the Tracking Error to the least possible through regular rebalancing of the portfolio, taking into account the change in weights of the securities in the index as well as the incremental Subscriptions/Redemptions from the Scheme.

The Scheme intends to use Derivatives for purposes that may be permitted by the SEBI MF Regulations from time to time. Derivatives instruments may take the form of Futures, Options or any other instrument, as may be permitted from time to time. For detailed Derivative strategies, please refer to SAI.

#### **Procedure and recording of investment decisions and risk control**

All investment decisions relating to the Scheme will be undertaken by the AMC in accordance with the Regulations and the investment objectives specified in this Scheme Information Document. All investment decisions taken by the AMC along with justification in relation to the Scheme shall be recorded.

The designated fund manager of the Scheme will be responsible for taking the day-to-day investment decisions and will *inter alia* be responsible for asset allocation, security selection and timing of investment decisions.

The Scheme may invest in other schemes managed by the AMC or in the schemes of any other mutual fund, provided it is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations. No investment management fees will be charged for such investments and the aggregate inter-scheme investment made by all schemes of the Mutual Fund or in the schemes under the management of other asset management companies shall not exceed 5% of the Net Asset Value of the Mutual Fund.

## **PORTFOLIO TURNOVER**

As the Scheme will follow a passive investment strategy, the endeavor will be to minimize portfolio turnover subject to the exigencies and needs of the Scheme. Generally, as the Scheme is open-ended, turnover will be confined to rebalancing of portfolio on account of new Subscriptions, Redemptions and change in the composition of the underlying index. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

A higher churning of the portfolio could attract high transactions of the nature of brokerage, custody charges, etc.

## **D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?**

Nifty Total Market Momentum Quality 50 TRI (Total Return Index) is selected as the benchmark of the Scheme.

Since the Scheme is an index fund, the composition of the benchmark is such that it is most suited for comparing performance of the Scheme.

**PART III- OTHER DETAILS**

**A. COMPUTATION OF NAV**

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding as on the valuation date. The Fund shall value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI MF Regulations or such norms as may be prescribed by SEBI from time to time, and as stipulated in the valuation policy and procedures mentioned in the SAI.

NAV of Units under the Scheme shall be calculated as shown below :  
NAV (Rs.) =

Market or Fair Value of Scheme's investments	+	Current Assets	-	Current Liabilities and Provisions
--	---	----------------	---	------------------------------------

---

No. of Units outstanding under the Scheme

During the continuous offer of the Scheme, the Units will be available at the Applicable NAV based prices. NAV will be calculated upto four decimal places at the close of every Business Day of the Scheme and will be declared on each Business Day.

**Illustration:**

**Computation of NAV –**

Market or Fair Value of Scheme's investments : Rs. 10,000,000;  
Current assets of the Scheme : Rs. 2,500,000;  
Current Liabilities and Provisions : Rs. 1,500,000;  
No. of Units outstanding : 500,000.

Thus, the NAV will be calculated as:

NAV =

Rs. 10,000,000	+	Rs. 2,500,000	-	Rs. 1,500,000
----------------	---	---------------	---	---------------

---

500,000

Therefore, the NAV of the Scheme is Rs. 22/-.

**Computation of Repurchase Price** - If the Applicable NAV is Rs. 10, Exit Load is 2% then Redemption price will be Rs. 10\* (1-0.02) = Rs. 9.80.

The Redemption Price will not be lower than 95% of the NAV.

For details on policies related to computation of NAV, rounding off, procedure in case of delay in disclosure of NAV, etc. please refer to SAI.

## SECTION II

### I. INTRODUCTION

#### **A. Definitions/Interpretation**

Please refer the following link for Definitions/Interpretations : [www.angelonemf.com/downloads](http://www.angelonemf.com/downloads)

#### **B. Requirement of minimum Investors in the Scheme**

The Scheme shall have a minimum of 20 Investors and no single Investor shall account for more than 25% of the corpus of the Scheme. In case the Scheme does not have a minimum of 20 Investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any Investor over the quarter, a rebalancing period of one month would be allowed and thereafter the Investor who is in breach of the rule shall be given 15 days' notice to redeem his/her/its exposure over the 25% limit. Failure on the part of the said Investor to redeem his/her/its exposure over the 25% limit within the aforesaid 15 days would lead to automatic Redemption by the Mutual Fund on the applicable Net Asset Value on the 15<sup>th</sup> day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

#### **C. Risk factors (Scheme specific risk factors)**

##### **(i) Risks associated with investing in companies constituting Nifty Total Market Momentum Quality 50 Index :**

The Scheme attempts to track its benchmark index and would invest in the securities constituting the index regardless of their investment merit. As such, the Scheme is exposed to certain specific risks relating to the index as given below :

- Performance of the Underlying Index (viz. Nifty Total Market Momentum Quality 50 Index) will have a direct bearing on the performance of the Scheme. In the event when the Underlying Index is dissolved or is withdrawn by NSE Indices Limited (NSEIL) or is not published due to any reason whatsoever, the Trustee reserves the right to modify the Scheme so as track a different and suitable index and appropriate intimation will be sent to the Unit holders of the Scheme. In such a case, the investment pattern of the Scheme will be modified suitably to match the composition of the securities that are included in the new index to be tracked and the Scheme will be subject to Tracking Errors during the intervening period, subject to applicable SEBI MF Regulations.
- Tracking Errors are inherent in any index fund and such errors may cause the Scheme to generate returns which are not in line with the performance of the Underlying Index or one or more securities covered by / included in the Underlying Index. Such errors may arise from a variety of factors including but not limited to, any delay in the purchase or sale of securities due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of Dividends, etc. Under normal circumstances, such Tracking Error is not expected to exceed 2% per annum. It needs to be clearly understood that the actual Tracking Error can be higher or lower.
- The Underlying Index reflects the prices of securities at a point in time, which is the price at close of Business Day on the National Stock Exchange of India Limited (NSE). The Scheme, however, may trade in these securities at different points in time during the trading session and therefore the prices at which the Scheme trades may not be identical to the closing price of each scrip on that day on the NSE. In addition, the Scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance, from NSE closing prices.
- NSEIL undertakes periodic reviews of the securities that are represented in the Underlying Index and

from time to time may exclude existing securities or include new ones. In such an event, the Scheme will endeavor to reallocate its portfolio to mirror the changes. However, the reallocation process may not occur instantaneously and permit precise mirroring of the Underlying Index during this period.

- Being an open-ended scheme, the Scheme may hold appropriate levels of cash or cash equivalents to meet ongoing Redemptions. The Scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to: circuit filters in the securities, liquidity and volatility in security prices.
- In case of investments in Derivatives like index futures, the risk reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares and there is a risk attached to the liquidity and the depth of the index futures market as it is relatively new market.
- Currency Risk: Companies within the index may have exposure to foreign currencies through international sales, imports, or foreign exchange contracts. Currency fluctuations can impact the earnings and cash flows of these companies, affecting the performance of the Scheme.
- Regulatory and Environmental Risk: Companies within the index may be subjected to regulatory requirements related to environmental protection, safety standards, labor practices, and land acquisition. Changes in regulations or compliance issues can affect production costs, supply chains, and profitability, impacting the Scheme's performance.
- Technological Disruption: Advances in technology, such as automation, robotics, and renewable energy, can disrupt supply chains, affecting the competitiveness and profitability of the companies held in the index which will have a direct bearing on the performance of the Scheme.
- Corporate Governance Risks: Weak corporate governance practices, such as inadequate board oversight, conflicts of interest, or related-party transactions, can undermine shareholder value and increase the risk of fraud, mismanagement, or regulatory scrutiny, affecting the Scheme's returns.
- Investments in the equity shares of the companies constituting the Underlying Index are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro-economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.
- Dividends from the constituent securities are assumed to be reinvested into the Underlying Index after the ex-dividend date of the constituents. However, in practice, the dividend is received with a lag. This can lead to some Tracking Error.
- The Scheme may not be able to sell securities in the market due to various reasons, which can lead to temporary illiquidity.

**(ii) Risks relating to Tracking Error and Tracking Difference :**

The performance of the Scheme may not be commensurate with the performance of its index on any given day or over any given period. Tracking Errors are inherent in any indexed fund and such errors may cause the Scheme to generate returns which are not in line with the performance of the index.

Tracking Errors may result from a variety of factors including but not limited to:

- Fees & Expenditure incurred by the Scheme.
- The funds may not be invested at all times as it may keep a portion of the funds in cash to meet Redemptions or expenses or for corporate actions of securities in the index.
- Any delay experienced in the purchase or sale of shares due to illiquidity of the market, settlement and realization of sale proceeds and the registration of any securities transferred and any delays in receiving cash and dividends and resulting delays in reinvesting them.
- Securities trading may halt temporarily due to circuit filters.

- The Underlying Index reflects the prices of securities at close of Business Hours. However, the Scheme may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the Exchange.
- The potential for trades to fail which may result in the Scheme not having acquired shares at a price necessary to track the index.
- The holding of a cash position to meet the Redemptions and other liquidity requirements) and accrued income prior to distribution and accrued expenses.
- Corporate actions
- Rounding off quantity of shares underlying the index.
- Disinvestments to meet Redemptions, recurring expenses, etc.
- Change in constituents of Underlying Index - in such an event, the Scheme will endeavor to reallocate its portfolio to replicate the changes. However, the reallocation process may not occur instantaneously and permit precise replication of the index due to prevailing market condition and such delay may affect the NAV of the Scheme.

The AMC would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error. Under normal circumstances, the AMC shall endeavor that the Tracking Error of the Scheme shall not exceed 2% per annum. However, in case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMC, the Tracking Error may exceed 2% and the same shall be brought to the notice of Trustee with corrective actions taken by the AMC, if any.

Tracking Difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall be disclosed on the websites of the Mutual Fund and AMFI, on a monthly basis, for tenures 1 year, 3 years, 5 year, 10 year and since the date of allotment of units. This would be applicable after the Scheme completes one year since inception.

**(iii) Risks associated with investing in equities and equity related securities:**

- Investments in the equity shares of the companies constituting the Underlying Index are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro-economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Scheme.
- Dividends from the constituent securities are assumed to be reinvested into the Nifty Total Market Quality Momentum 50 Index after the ex-dividend date of the constituents. However, in practice, the dividend is received with a lag. This can lead to some Tracking Error.
- The Scheme may not be able to sell securities in the market due to various reasons, which can lead to temporary illiquidity.

**(iv) Passive Investments:**

The Scheme is not actively managed. Since the Scheme is linked to index, it may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme in line with its investment objective will invest in securities which are constituents of its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

**(v) Settlement Risk:**

In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the

Scheme portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the Scheme portfolio.

**(vi) Portfolio Concentration Risk:**

To the extent that the Scheme may concentrate its investments in the securities of companies of certain companies/sectors, the Scheme will be subject to the risks associated with such concentration. In addition, the Scheme may be exposed to higher levels of volatility and risk than would generally be the case in a more diverse fund portfolio of equity securities. Such risks may impact the Scheme to the extent that it invests in particular sectors even in cases where the investment objective is more generic.

**(vii) Volatility Risk:**

The equity markets and Derivative markets are volatile and the value of securities, Derivative contracts and other instruments correlated with the equity markets may fluctuate dramatically from day to day. This volatility may cause the value of investment in the Scheme to decrease.

**(viii) Right to Limit Redemptions:**

The Trustee, in the general interest of the Unit holders of the Scheme offered in this Document and keeping in view the unforeseen circumstances / unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day. The same shall be in accordance with paragraph 1.12 of the SEBI Master Circular dated June 27, 2024.

**(ix) Risks associated with investing in Money Market Instruments:**

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/bond or a Money Market Instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government Securities, there is no credit risk to that extent. Different types of securities in which the Scheme would invest as per its asset allocation pattern, carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. E.g. commercial papers carry a higher amount of risk than Government Securities. Further, commercial papers which are A1+ rated are comparatively less risky than those which are B1+ rated.
- **Re-investment Risk:** Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the security. Consequently, the proceeds may get invested at a lower rate.
- **Liquidity Risk:** Due to the evolving nature of the fixed income market, there may be an increased risk of liquidity risk in the portfolio from time to time.

Investments in money market / liquid schemes will also be subject to the above risks.

**(x) Risks relating to portfolio rebalancing :**

In the event that the asset allocation of the Scheme deviates from the ranges as provided in the asset allocation table in this SID, then the Fund Manager will rebalance the portfolio of the Scheme to the position indicated in the asset allocation table.

**(xi) Risk factors associated with investing in Derivatives:**

The Scheme may use Derivatives instruments like stock/index futures or other Derivative instruments for the purpose of portfolio balancing, as permitted under the applicable regulations and guidelines. Use of Derivatives requires an understanding of not only the underlying instrument but also of the Derivative itself.

Usage of Derivatives will expose the Scheme to certain risks inherent to such Derivatives. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the Investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and the decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of Derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The specific risk factors arising out of a Derivative strategy used by the fund manager are given below:

- Lack of opportunity available in the market;
- The risk of mispricing or improper valuation and the inability of Derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.
- Basis Risk: This risk arises when the Derivative instrument used to hedge the underlying asset does not match the movement of the underlying asset being hedged.
- Exchanges could raise the initial margin, variation margin or other forms of margin on Derivative contracts, impose one sided margins or insist that margins be placed in cash. All of these might force positions to be unwound at a loss and might materially impact returns.

**(xii) Risk factors associated with Stock Lending :**

Stock Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in security lending consist of the failure of intermediary/counterparty, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the intermediary / counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

**(xiii) Risks associated with segregated portfolio:**

- **Liquidity risk** – A segregated portfolio is created when a credit event / default occurs at an issuer level in the Scheme. This may reduce the liquidity of the security issued by the said issuer, as demand for this security may reduce. This is also further accentuated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the Scheme will be closed for Redemption and Subscriptions until the segregated portfolio is created, running the risk of Investors being unable to redeem their investments. However, it may be noted that the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.

Investors may note that no Redemption and Subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to Unit holders in segregated portfolio, the AMC shall list the units

of the segregated portfolio on a recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the Exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that an active secondary market will develop for units of segregated portfolio listed on the Stock Exchange. This could limit the ability of the Investors to resell them.

- **Valuation risk** - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

**(xiv) Risks associated with trading through mutual fund trading platforms of BSE and/ or NSE:**

In respect of transactions in Units of the Scheme through BSE and/or NSE, allotment and Redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/or NSE and their respective clearing corporations, on which the Mutual Fund has no control. Investors may face delays in processing their Subscriptions/Redemptions due to various factors affecting the order processing/settlement process at BSE and/or NSE and their respective clearing corporations.

**(xv) Risks associated with investing in Government of India securities:**

- **Market liquidity risk** - Even though the Government of India securities market is more liquid compared to other debt instruments, on certain occasions, there could be difficulties in transacting in the market due to extreme volatility leading to constriction in market volumes. Also, the liquidity of the Scheme may suffer in case the relevant guidelines issued by Reserve Bank of India undergo any adverse changes.
- **Interest rate risk** - While Government of India securities generally carry relatively minimal credit risk since they are issued by the Government of India, they do carry price risk depending upon the general level of interest rates prevailing from time to time. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates decline, the prices of fixed income securities increase. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in the level of interest rates. The price-risk is not unique to Government of India securities and exists for all fixed income securities. Therefore, their prices tend to be influenced more by movement in interest rates in the financial system than by changes in the Government's credit rating. By contrast, in the case of corporate or institutional fixed income securities, prices are influenced by their respective credit standing as well as the general level of interest rates.

**(xvi) Risks associated with investing in TREPS Segments :**

As a member of the securities and TREPS segments of the Clearing Corporation of India (CCIL), all transactions of the Mutual Fund in Government Securities and in TREPS segments will be settled centrally through the infrastructure and settlement systems provided by CCIL, thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members of CCIL are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). The Mutual Fund will be exposed to the extent of its contribution to the default fund of CCIL at any given point in time. In the event that the default waterfall is triggered and the contribution of the Mutual Fund is called upon to absorb settlement/default losses of another member by CCIL, the Scheme may lose an amount equivalent to its contribution to the default fund allocated to the Scheme on a pro-rata basis.

**(xvii) Risks associated with investing in securitized debt:**

The Scheme will not invest in securitized debt.

**(xviii) Risks associated with investing in Foreign Securities:**

The Scheme will not invest in Foreign Securities.

**(xix) Risks associated with short selling:**

The Scheme will not engage in short selling of securities.

**D. Risk Management Strategies**

The Scheme will endeavor to manage risks associated with investing in equity and debt and money market securities by following a holistic risk management strategy. The risk control process involves identifying and measuring risks through various risk measurement tools.

The AMC has identified following risks of investing in equity and debt and money market securities and designed risk management strategies, which are embedded in the investment process to manage such risks :

**Risks associated with investments in equity and equity related securities**

Risk Description	Risk Mitigants / management strategy
<p><b>Market Risk</b> The Scheme is vulnerable to movements in the prices of securities invested by the Scheme, which could have a material bearing on the overall returns from the scheme. The value of the Scheme’s investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and fixed income markets.</p>	<p>Market risk is inherent to an equity scheme. Being a passively managed Scheme, it will invest in the securities included in its Underlying Index.</p>
<p><b>Liquidity risk</b> The liquidity of the Scheme’s investments is inherently restricted by trading volumes in the securities in which it invests.</p>	<p>Stocks in the Underlying Index are primarily selected on the basis of market capitalization by the index provider. The index is rebalanced based on the frequency and methodology specified. The fund manager shall make changes to the portfolio accordingly.</p>
<p><b>Derivatives Risk</b> As and when the Scheme trades in the Derivatives market there are risk factors and issues concerning the use of Derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a Derivative requires an understanding not only of the underlying instrument but also of the Derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a Derivative adds to the portfolio and the ability to forecast price or</p>	<p>Derivatives will be used in the form of Index Options, Index Futures and other instruments as may be permitted by SEBI. All Derivatives trade will be done only on the Exchange with guaranteed settlement.</p> <p>The AMC monitors the portfolio and regulatory limits for Derivatives through its front office monitoring system. Exposure with respect to Derivatives shall be in line with regulatory limits and the limits specified in the SID. No OTC contracts will be entered into.</p>

Risk Description	Risk Mitigants / management strategy
<p>interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the Derivatives contract. Other risks in using Derivatives include the risk of mis- pricing or improper valuation of Derivatives and the inability of Derivatives to correlate perfectly with underlying assets, rates and indices.</p>	
<p><b>Tracking Error risk (Volatility/ Concentration risk)</b> The performance of the Scheme may not commensurate with the performance of the Underlying Index on any given day or over any given period.</p>	<p>Over a short to medium period, the Scheme may carry the risk of variance between portfolio composition and Benchmark. The objective of the Scheme is to track the performance of the Underlying Index over the same period, subject to Tracking Error. The Scheme would endeavor to maintain a low Tracking Error by actively aligning the portfolio in line with the Index.</p>

**Risks associated with investments in debt and money market securities**

Risk Description	Risk Mitigants/management strategy
<p><b>Market Risk / Interest Rate Risk</b> As with all fixed income securities, changes in interest rates may affect the Scheme’s Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>The Scheme may invest in Money Market Instruments having relatively shorter maturity thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities.</p>
<p><b>Liquidity risk or Marketability Risk</b> This refers to the ease with which a security can be sold at or near to its valuation yield- to maturity (YTM).</p>	<p>The Scheme may invest in Money Market Instruments having relatively shorter maturity, which have low liquidity risk, as compared to medium to long maturity securities.</p>
<p><b>Credit Risk</b> Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security).</p>	<p>Management analysis may be used for identifying company specific risks. Management’s past track record may also be studied. Preference will be towards high quality instruments.</p>
